

Class Description:

In 7/8 science, we will be exploring creation through general science. Science is a fascinating subject, it allows us to study the world around us that God created.

We will spend approximately two weeks on each chapter. Each week, students will be required to read on their own at home and come prepared to have a class discussion. We will also be doing plenty of experiments, both as a class and individually.

Note-taking is highly encouraged. This will help the student not just with science, but with other subjects as well. I find that we retain more information when we write it down, or even draw pictures!

Each day, homework will be written on the board for the students to take note in their planners. All homework assignments require a name, to be legible, and turned in on time.

Communication will be done through email and text as needed.

Required class materials:

- [Exploring Creation with General Science 3rd Edition Text Book](#)
- [Exploring Creation with General Science 3rd Edition Student Notebook](#)
- \$20 lab fee per student
- #2 pencils
- Red pen
- College ruled paper
- 1" binder
- Student planner
- Composition notebook for notetaking
